

New fare for more climate-friendly flying

# GREEN FARES ARE HERE

Flying more sustainably is now just a click away. Since February, Lufthansa Group has been the world's first airline group to offer fares that include offsetting of individual, flight-related CO<sub>2</sub> emissions. Our goal is to encourage more people to choose sustainable flying options.

Lufthansa Group aims to halve its net CO<sub>2</sub> emissions by 2030 compared to 2019, and to be carbon-neutral by 2050. To achieve this, we are investing billions of euros in modern, fuel-efficient aircraft. This year, Lufthansa Group received a new aircraft every ten days on average. We have been purchasing and using biogenic SAF (Sustainable Aviation Fuels) for several years, and are already investing in the next generation of SAF, such as Power-to-Liquid and Sun-to-Liquid technologies. The Lufthansa Group is actively involved in numerous collaborations and projects worldwide to ensure greater SAF availability.

At the same time, we want to make it easier for our customers to reduce the carbon footprint of their flights. For quite some time now, Lufthansa Group passengers have had the option to offset the CO<sub>2</sub> emissions of their journey. This can be achieved either by using SAF or through certified climate protection projects to offset flight-related emissions.

In mid-February, Lufthansa Group launched a new fare that combines both measures.

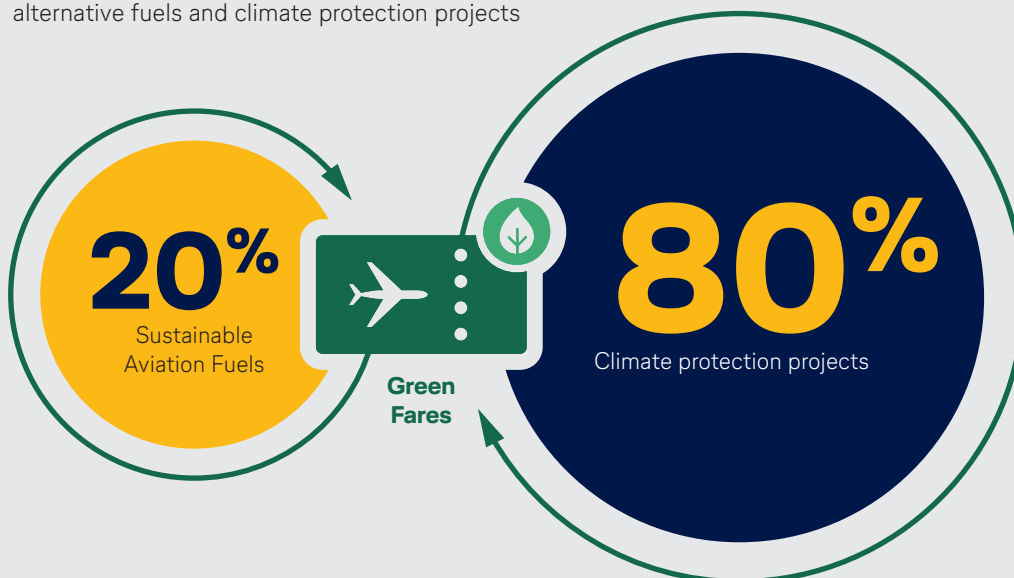

Green Fares offer numerous advantages:

- **Climate protection:** For the offsetting of CO<sub>2</sub> emissions, 20 percent are offset through the use of Sustainable Aviation Fuels (SAF), while the remaining 80 percent are achieved by contributing to climate protection projects certified to the highest standards.
- **Convenience:** The fare can be selected directly in the booking process. Previously, the compensation of the flight had to be selected at the end of the booking process.
- **Attractiveness:** Passengers who opt for Green Fares receive additional status miles and enjoy a free rebooking option.

Green Fares have proven to be a successful product. Until the end of last year, only one percent of our passengers had chosen the offsetting option. This figure has now increased to three percent. Our new goal is to reach five percent by the end of the year.

**Green Fares**

Reducing and offsetting CO<sub>2</sub> emissions through alternative fuels and climate protection projects

Since the introduction of the new fare, more than 265,000 passengers have opted for Green Fares. They have thus reduced or offset their CO<sub>2</sub> emissions by a total of 27,500 tonnes. The fares can be booked with Lufthansa, Austrian Airlines, Brussels Airlines, SWISS, Edelweiss, Eurowings Discover, and Air Dolomiti on more than 730,000 flights per year within Europe and to North Africa. The route with the most Green Fares bookings is Zurich-London with SWISS, followed by Hamburg-Munich with Lufthansa.
