AIR FARE FOR SUSTAINABLE TRAVEL

Carbon-neutral by 2050. To reach this goal, the Lufthansa Group is investing in highly efficient aircraft, sustainable fuels and the optimisation of processes. At the same time, we want to bring the idea of sustainable flying closer to our passengers. With our new Green Fares tickets, environmentally friendly travel becomes very easy.

More convenient

Until now, travellers could add CO₂ compensation to their flight at the end of the booking process. In contrast, our Green Fares are a separate type of air fare that can be selected directly. Booking the tickets is very easy and can be done on the websites of Austrian Airlines, Brussels Airlines, Lufthansa, SWISS, Air Dolomiti, Edelweiss and Eurowings Discover or at your travel agent. In Economy Class, prices start at EUR 115. In Business Class, fares start at EUR 255.

With our new "Green Fares", launched in February, passengers can fully offset the CO₂ emissions from their flight with just one click. No other airline worldwide offers a comparable product. The Lufthansa Group's Green Fares already make carbon-neutral flying possible today.

A combination of reduction and offsetting

20 percent of the CO₂ offsetting is achieved through the use of sustainable aircraft fuels and 80 percent through a contribution to climate protection projects certified to the highest standards.

Green Fares can be booked for all flights within Europe and for flights to Morocco, Algeria and Tunisia. There are also

further plans to include intercontinental routes. To make the programme more attractive, the special fares include additional status miles and a free-of-charge rebooking option.

Paris Climate Agreement as a goal

Measures such as the Green Fares are an important component of our highly ambitious climate protection goals. As early as 2030, the Lufthansa Group aims to halve their net CO₂ emissions compared to 2019 – the concrete timeline for reductions was confirmed in 2022 by the independent Science Based Targets Initiative (SBTi). This makes the Lufthansa Group the first airline group in Europe with a scientifically based CO₂ reduction goal that is in line with the goals of the Paris Climate Agreement.
