

**UN World Climate Conference**

# SPECIAL FARE WITH SAF FOR FLIGHTS TO DUBAI

At the end of November, the UN Climate Change Conference, COP28, will start in Dubai, with thousands of participants from around the world expected to join. To promote climate-friendly mobility, the Lufthansa Group is presenting an especially sustainable package of services.

Travelers from Germany, Austria, Switzerland, and Belgium can benefit from a special fare that offsets 100 percent of

flight-related CO<sub>2</sub> emissions through sustainable aviation fuel (SAF). In addition, this offer includes a free rebooking option and a bicycle voucher that can be used for a week in Dubai and Abu Dhabi. Business Class guests can further take advantage of an airport-to-hotel transfer by e-limousine. This special fare is available across all booking classes and can be booked on the [Lufthansa website](#) until December 10.

**AeroSHARK**

# MORE AND MORE AIRCRAFT WITH “SHARK SKIN”

AeroSHARK, a surface structure jointly developed by Lufthansa Technik and BASF, is a successful project for enhancing climate protection in aviation: it reduces friction, and thus the aircraft drag, thereby cutting fuel consumption by approximately one percent. Notably, the Lufthansa Group is the

world's first airline group to equip over 20 aircraft with this innovative technology. To date, 14 long-haul aircraft operated by Lufthansa, SWISS, and Lufthansa Cargo have undergone modifications, each featuring several hundred square meters of the riblet film.
